LIM YU HAN	A23CS0241
TAN ZHI MING	A23CS0189
NG YU HIN	A23CS0148

Title: Gathering requirements -Task Analysis

Introduction

We will be testing our application on our users which are environmental enthusiasts and activists,online researchers and students on Google app .Three tasks will be searching locations,searching images and searching history.

Our aim is to obtain user experience feedback about how Google app features function properly, and evaluate how the app fulfils users' demands.From this we can make improvements or modifications to our project.

Three tasks have been chosen for observation including search locations, search images, and search history. To obtain a wide view of the app's functionality, these tasks will be completed by three users with various backgrounds. This will help us to figure out where we can improve and how effectively the app serves the users.

Task 1 – Search Location

a. online researcher

HCI project 2a User 1 Task 1-Search Location

b. student

https://youtu.be/AgTxnHck3I8

0. Search location
1. Open Google app
2. Enter Search Query
   2.1 Click on search bar
   2.2 Type desired location
3. Execute the search
   3.1 Click "Search" button on keyboard
   3.2 Wait for search results to load
4. Review search result
   4.1 Check for the accuracy of information
5. View location
   5.1 Click maps
   5.2 Click directions
6. View transport
   6.1 Choose desired transport
7. Click start

Plan 0 : do 1 -> 2 -> 3 -> 4 -> 5 -> 6 -> 7, if 4 not satisfied, back to 2 again

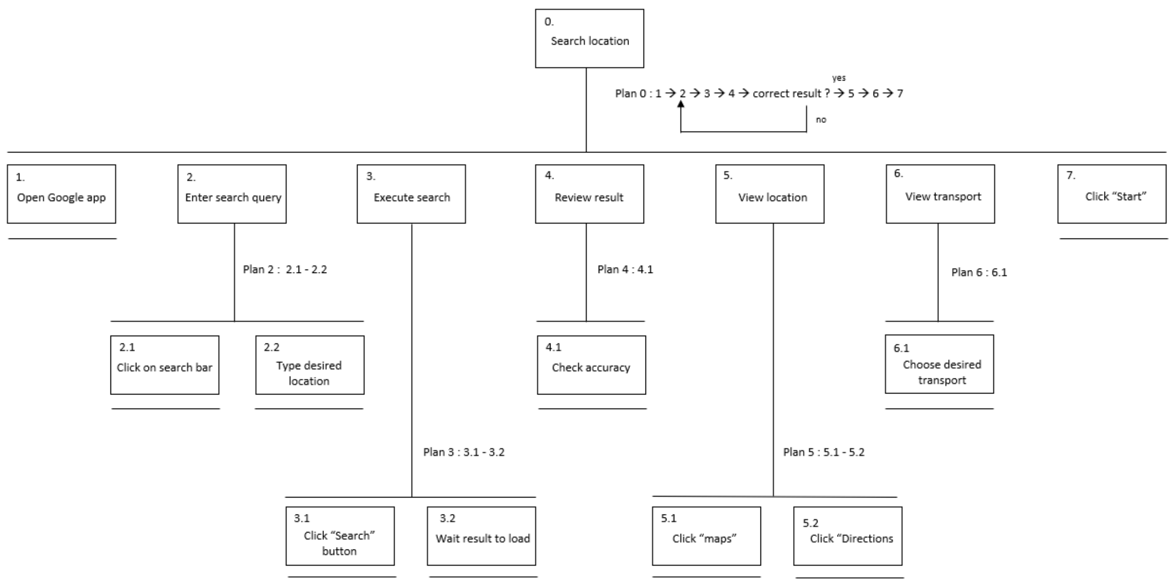
Plan 2 : do 2.1, then 2.2

Plan 3 : do 3.1, then 3.2

Plan 4 : do 4.1 to review result

Plan 5 : do 5.1, then 5.2 to view location

Plan 6 : do 6.1 to choose type of transportation



c. environment enthusiasts

https://youtu.be/xq38XlQzxAc

0. search location path
1. Open the google app
2. Enter location in search bar
3. Click maps
4. Click directions

5. Choose type of transport

6. Customise map detail

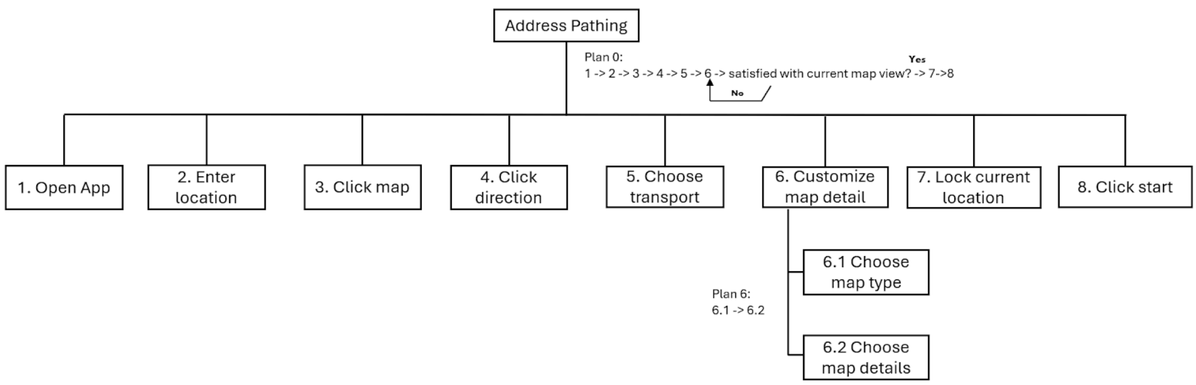
    6.1 Choose Map type

    6.2 Choose Map detail

7. Click target current location icon

8. Click start

Plan 0: Do 1-> 2 -> 3 -> 4 -> 5 -> 6 ->if satisfied proceed 7, if not back to 6->7->8
Plan 6: DO 6.1->6.2



Task 2 – Search Image

a. online researcher

HCI project 2a User 1 Task 2-Search Image

b. student

https://youtu.be/Zy1yIn-e4Sc

0. Search image

1. Open Google app

2. Access Google Lens

    2.1 Tap camera icon

3. Select image

    3.1 select image from gallery

        3.1.1 browse through device’s photo

        3.1.2 choose desired image

    3.2 capture image

        3.2.1 point device’s camera at the object

        3.2.2 align image within the frame

4. Click search icon

5. Analyse result

    5.1 scan through search result

    5.2 check for the accuracy of information

Plan 0 : do 1 -> 2 -> 3 -> 4 -> 5, if 5 not satisfied, back to 3 again

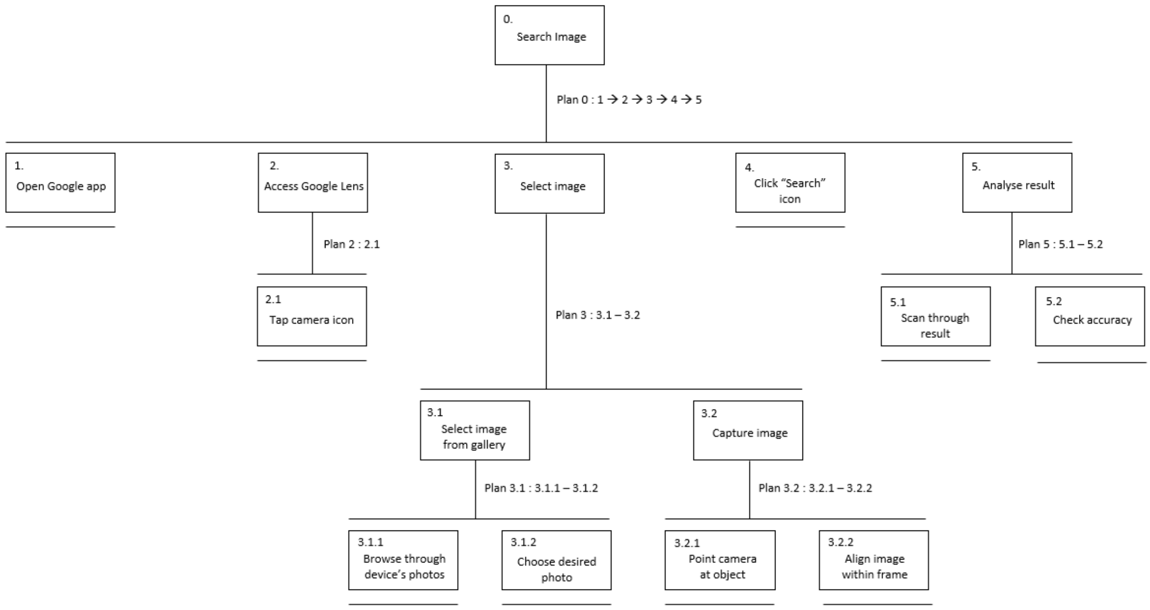
Plan 2 : do 2.1 to access Google Lens

Plan 3 : do 3.1 or 3.2 to select type to capture image

Plan 3.1 : do 3.1.1, then 3.1.2 to select image from gallery

Plan 3.2 : do 3.2.1, then 3.2.2 to capture image using camera

Plan 5 : do 5.1, then 5.2 to analyse result



c. environment enthusiasts

https://youtu.be/vb39pV5T_T0

0. Image searching

1. Open the google app

2. Click the button of image search

3. Select image

    3.1 Select image from gallery

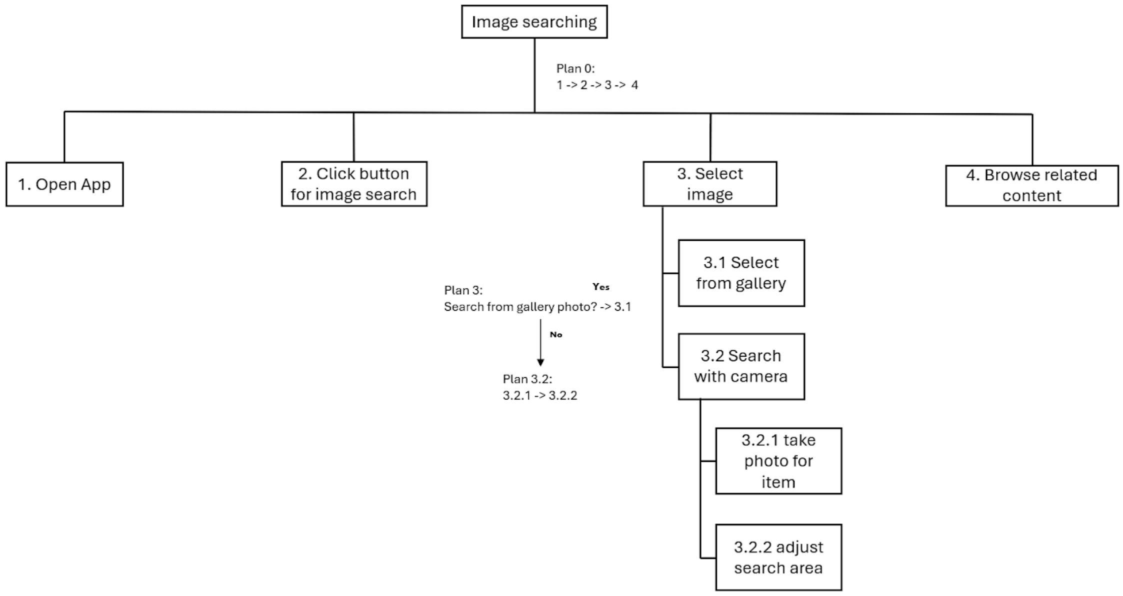
    3.2 Search with camera

    3.2.1 take photo for the item

    3.2.2 adjust search area

4. Browse related content

Plan 0: Do 1-> 2 -> 3 -> 4
Plan 3: If search from gallery photo proceed to 3.1 , if not proceed to 3.2
Plan 3.2 : Do 3.2.1 -> 3.2.2



Task 3 – Search History

a. online researcher

HCI project 2a User 1 Task 3-Search History

b. student

https://youtu.be/Zu9Y5YCH_5E

0. Search history
1. Open Google app
2. Click G icon
3. Open profile
4. Click on "Search history"
5. Review search history
    5.1 look for desired search history

5.2 manually search

5.2.1 click magnifier icon

5.2.2 enter search query

5.2.3 click apply

6. Interpret search result

6.1 scan through the result

6.2 choose for desired title

6.3 click desired search result

7. View browsing history

7.1 Directed to a webpage

7.2 Review the content

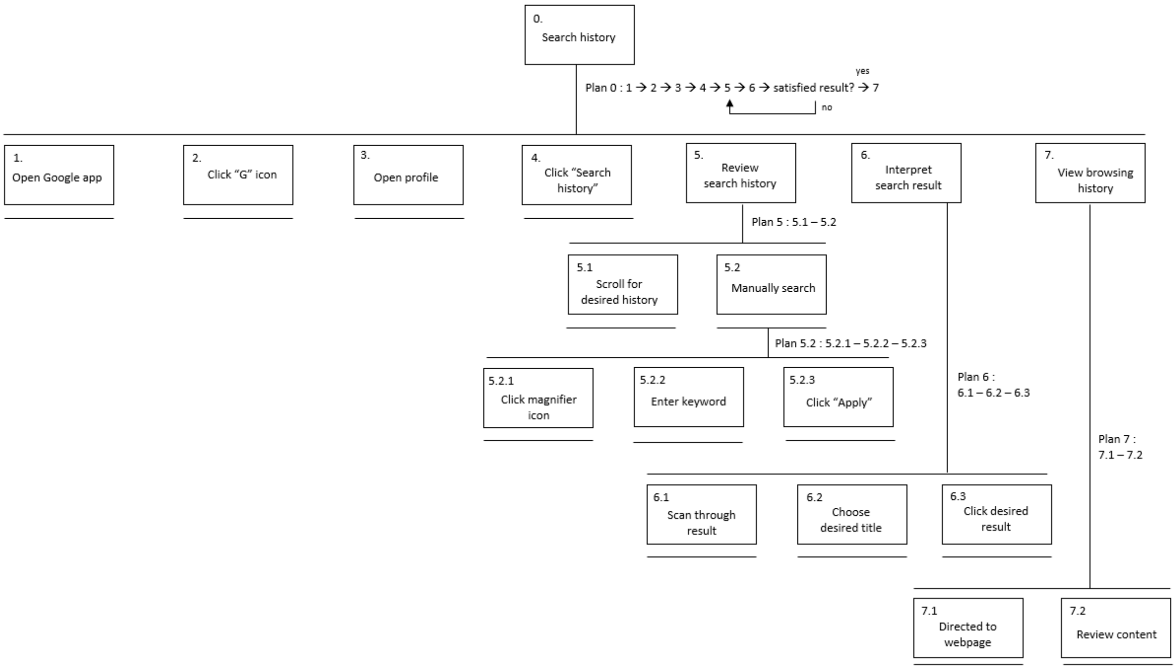
Plan 0 : do 1 -> 2 -> 3 -> 4 -> 5 -> 6 -> 7, if 6.1 not satisfied, back to 5 again

Plan 5 : do 5.1, then 5.2 to choose type to review history

Plan 5.2 : do 5.2.1, then 5.2.2, then 5.2.3 to search history manually

Plan 6 : do 6.1, then 6.2, then 6.3 to analyse search result

Plan 7 : do 7.1, then 7.2 to view history

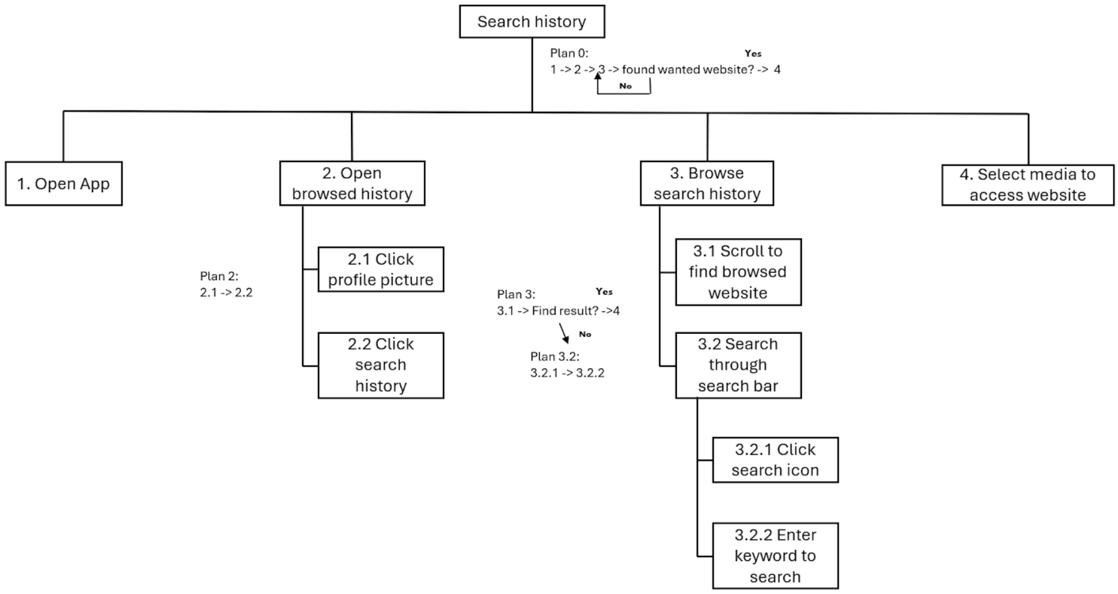


c. environment enthusiasts

https://youtu.be/HoerniWK9PM

0. Search History
1. Open the google app
2. Open browsed history
    2.1 Click profile picture
    2.2 Click search history
3. Browse search history
    3.1 Scroll to find browsed website
    3.2 Search through search bar
    3.2.1 Click search icon
    3.2.2 Enter keyword to search
4. Select media to access website

Plan 0: Do 1-> 2 -> 3 -> 4
Plan 2 :Do 2.1->2.2
Plan 3: Do 3.1->if find result proceed 4 , if no proceed to 3.2
Plan 3.2: Do 3.2.1->3.2.2



Search history
Plan 0:
1 -> 2 -> 3 -> found wanted website? -> 4
Yes
No
1. Open App
2. Open browsed history
3. Browse search history
4. Select media to access website
Plan 2:
2.1 -> 2.2
2.1 Click profile picture
2.2 Click search history
Plan 3:
3.1 -> Find result? ->4
Yes
No
Plan 3.2:
3.2.1 -> 3.2.2
3.1 Scroll to find browsed website
3.2 Search through search bar
3.2.1 Click search icon
3.2.2 Enter keyword to search

Design requirements

Based on our research of existing application like Google, we have compiled a set of design requirements that will be incorporated into our redesigned version of Ecosia:

1. Implement a seamless and accurate address pathing feature that integrates with mapping services for precise location identification.

2. Develop comprehensive search history functionality that enables user to view,manage and delete their search history

3. Integrate image search capabilities by potentially using AI-driven technologies for visual search functionality similar to Google Lens

By analysing the users' thought processes, we have been able to clearly identify specific steps they take to complete designated tasks. This analysis has provided us with insights on how to improve our system's usability and efficiency.
