Lab Assignment 1

DAILY ACTIVITIES RECORDER APP

Lecturer: DR SEAH CHOON SEN

Name	Matric Number
NG YU HIN	A23CS0148

OBJECTIVES

The objective of this assignment is to develop a simple Flutter application that allows users to record and manage their daily activities using basic Flutter concepts such as StatefulWidget, setState, and ListView.

BRIEF DESCRIPTION OF THE SYSTEM

The Daily Activities Recorder application is designed to assist users in organizing and tracking their daily tasks efficiently. It enables users to plan their schedules by recording different activities along with their respective time or category.

The system supports the fundamental operations commonly known as CRUD:

- **Create**
Users are able to input and save new activities by entering the activity name together with its time or category.
- **Read**
All saved activities are displayed on the main screen, allowing users to easily view their recorded tasks.
- **Update**
Existing activities can be modified by selecting them and editing their details.
- **Delete**
Users can remove any activity from the list by pressing the delete option provided.
-

EXPLANATION OF THE INTERFACE

The application interface is organized into three main sections for better usability and clarity.

1. Input Area

AppBar

Located at the top of the screen, the AppBar displays the application title, *"Daily Activities Recorder"*.

Activity Name Input Field

This text field allows users to enter the name of the activity they want to record.

Time/Category Input Field

This field is used to input additional details such as the time such as 8:00 AM or the category of the activity such as Exercise or Study.

2. Action Buttons

Add / Update Button

This button is implemented using an `ElevatedButton`. Its function changes depending on the situation:

- Displays "**Add Activity**" when creating a new entry
- Displays "**Update Activity**" when modifying an existing one

Pressing this button will either add a new activity or update the selected one.

Clear Button

This button is used to reset the input fields. It can also cancel the editing process without saving any changes.

3. Activity Display

Activity List

The lower section of the screen contains a `ListView` that dynamically displays all recorded activities.

Activity Cards

Each activity is presented in a card format, showing the activity name along with its time or category.

Edit Icon

This icon allows users to edit an existing activity by loading its details back into the input fields.

Delete Icon

This icon enables users to permanently remove a specific activity from the list.

SCREENSHOT OF THE APPS

Daily Activities Recorder

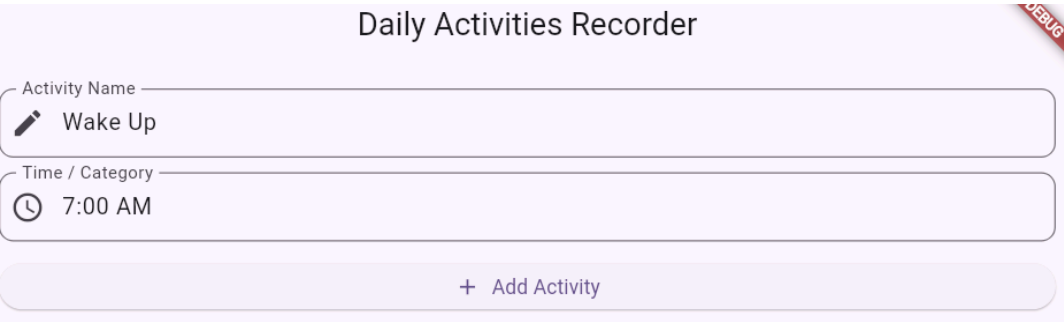

Activity Name

Time / Category

+ Add Activity

Activities

No activities yet

Daily Activities Recorder

Activity Name

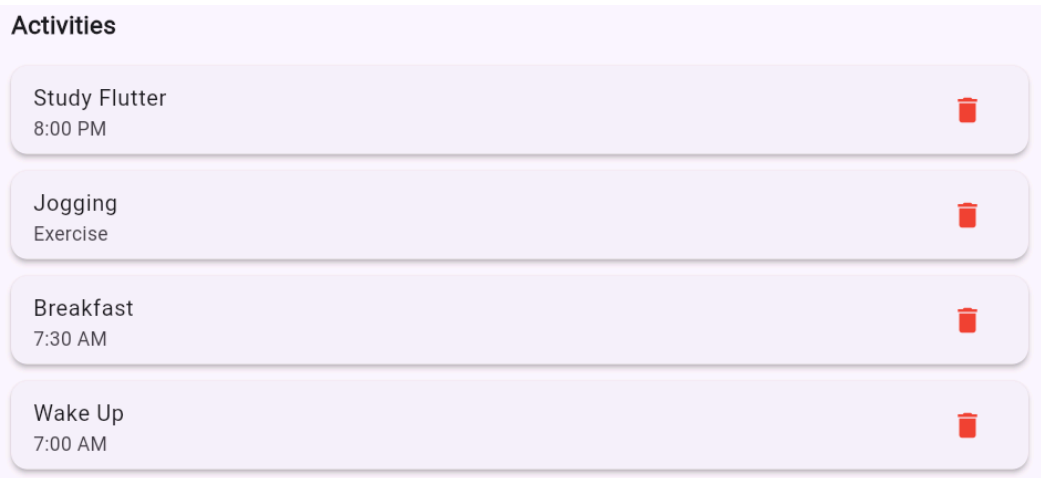

Wake Up

Time / Category

7:00 AM

+ Add Activity

Users can add an activity and its corresponding time or category to the list by entering the information into the respective input fields. The activity is added by clicking the “Add Activity” button.

Activities

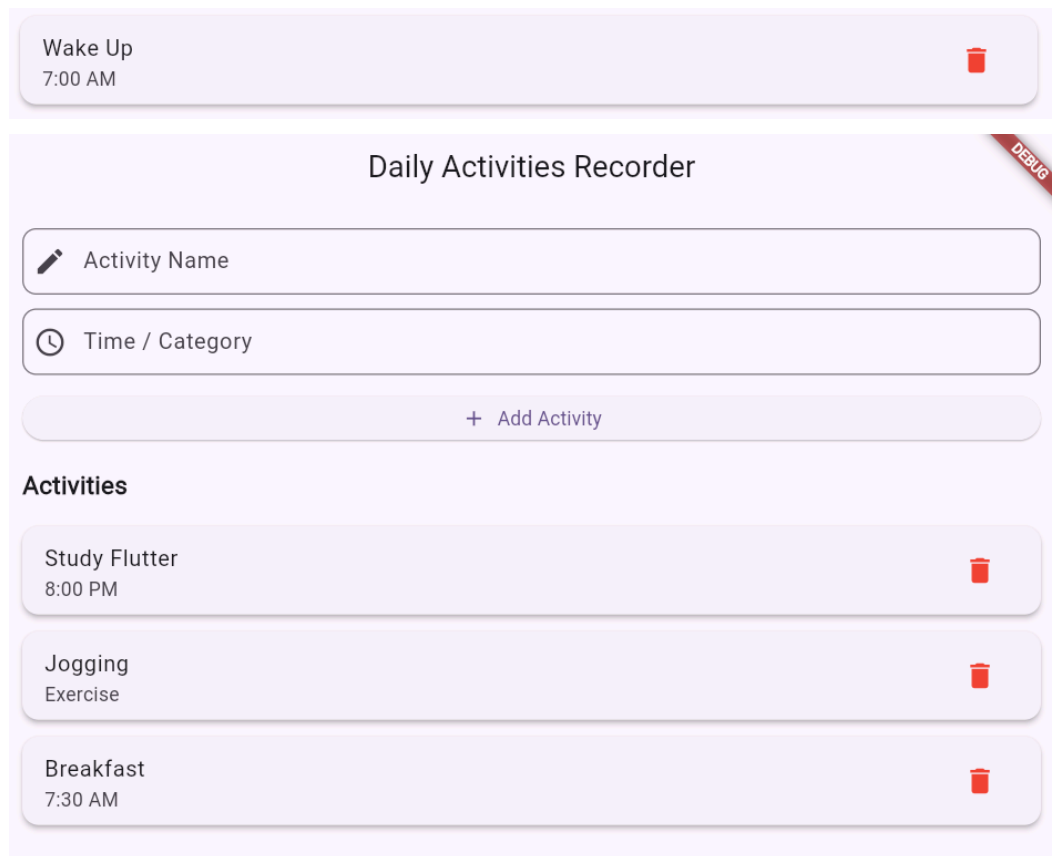

Study Flutter
8:00 PM

Jogging
Exercise

Breakfast
7:30 AM

Wake Up
7:00 AM

Users can access the complete list of recently added activities through the Activity List. From this list, an activity can be deleted by selecting the corresponding button.

By pressing the Red Rubbish Bin button, the user can permanently erase the action.

CONCLUSION

The Daily Activities Recorder successfully uses Flutter fundamentals such as StatefulWidget, setState(), and ListView to create a simple, functional application for managing daily tasks including add, view, update, delete activities. This project provides a strong basis for understanding Flutter and offers a solid platform for future enhancements.
