Question

I.	Provide a brief description on the technology that you have chosen – generally, what is its purpose?	3
II.	Feature of ShareTheMeal in Accordance of Fogg Behavior Model	5
III.	Video for feature of ShareTheMeal in Accordance of Fogg Behavior Model	8
IV.	Choose one feature of the technology which in yur opinion fail to Persuade a user to execute the target behavior	8
V.	Reference List	10

**Question A: Provide a brief description on the technology that you have chosen – generally, what is its purpose?
(e.g. environmental awareness, managing diseases, living happily etc.)**

The United Nations (UN) is implementing the Sustainable Development Goal (SDG) in our community to foster a more harmonious and improved society. One specific goal, associated with the World Food Programme (WFP), is Zero Hunger (Goal 2), with a mission to create a world free of hunger by 2030. ShareTheMeal, an application affiliated with WFP, aims to contribute to achieving this goal.

To achieve Zero Hunger, we have discovered the *ShareTheMeal* app, which directly contributes to the United Nations' Sustainable Development Goal of zero hunger. This app is designed for the digital age, enabling everyone to participate and making donations simple and accessible. ShareTheMeal disrupt traditional donation activities by requiring only a smartphone, allowing users to donate anytime, anywhere, significantly increasing their willingness and frequency of participation

Moreover, ShareTheMeal encourages users to engage in charitable actions through social media sharing. The sharing feature enables users to easily share donation certificates to their social networks with just one click. By sharing these certificates, individuals can inspire those around them to pay attention and take action, creating a positive cycle that advances one of the United Nations' Sustainable Development Goals: zero hunger.

The success of this app lies in its excellent combination of people's needs for convenience and social recognition, transforming acts of kindness into activities that can be shared on social platforms and enhancing individuals' sense of involvement. Through apps like ShareTheMeal, everyone can contribute their part, no matter how small the donation, but collectively, we can all work together to address global hunger issues.

WORLD VISION'S 30 HOUR FAMINE

ShareTheMeal stands out by launching targeted campaigns and initiatives aimed at addressing hunger challenges. These efforts are tailored to meet the needs of communities grappling with food insecurity highlighting the apps ability to adapt and respond swiftly to real time issues. During times ShareTheMeal effectively mobilizes its user community leveraging their support and passion to drive meaningful change. By uniting individuals, around initiatives the app boosts its impact in fighting hunger making a significant contribution, towards the overarching goal of achieving a hunger free world by 2030

Question B : Feature of ShareTheMeal in Accordance of Fogg Behavior Model

HW MODELS & FRAMEWORKS

The Fogg Model

Aka the B=MAP Model

The Fogg Behavior Model consists of three elements known as motivation, ability and triggers. Essentially this model suggests that in order for a desired behavior to take place an individual must have the level of motivation, the necessary skills or resources and a prompt or cue to act. All three components need to align for the behavior to be carried out. The Fogg Behavior Model plays a role, in encouraging users to develop an affinity and interest, in a particular technology thereby enabling them to reap the maximum benefits and satisfaction while engaging with or using the technology. After closely examining the elements of the Fogg Behavior Model, we have identified specific tasks and features within the ShareTheMeal application that align with this model to effectively persuade users and encourage the desired behavior. Below are the tasks and features that designed to facilitate and guide users in executing the target behavior of contributing to ending hunger while using the ShareTheMeal application.

1. Reminder and updates notifications

The ShareTheMeal app's key feature includes sending timely reminders to encourage users to contribute funds for those affected by hunger and conflict.

Target behaviour : users click the reminders to consistently donate money to provide meals for those facing hunger and conflict through the app's reminders and donation features.

Ability : The ShareTheMeal app make the donation process easier enable users contribute with just a few taps on their smartphone by providing time reminders and updates. These notifications serve as prompts, consistently reminding individuals willing to help those in need. Furthermore, the app's user interface provides a range of secure payment methods that enhance the ability to donate and reduce participation barriers.

Motivation : The notification system of the ShareTheMeal app plays a crucial role in motivating users to donate. The app ensures that users are consistently reminded of the opportunity to contribute to those in need by sending reminders and update notifications consistently. This app also informs users about ongoing emergency goals and crises encourage them to take immediate action to provide assistance to people in need.

Trigger : The trigger for this behavior is the notification reminders set by the ShareTheMeal app. These notifications serve as prompts for users to donate, reminding them of the opportunity to contribute to the cause. The app will notify when launching emergency goals to support people affected by catastrophes, natural disasters and other crises. The notifications effectively remind users of the opportunity to contribute to the cause, keeping it at the forefront of their minds.

2. Tracking real time progress and goals

Users can stay informed about the latest updates on the number of meals they have donated, providing them with a sense of accomplishment and transparency regarding their contributions to combating hunger

Target behaviour : users can click **DONATE NOW** button to donate money until it reaches a milestone of a specific number of meals.

Ability : ShareTheMeal offers a flexible donation option that is inclusive and accessible to people from all walks of life. The ShareTheMeal app enhances user's ability to donate by allowing donations as low as RM3.50 which covers the cost of one meal. This price is affordable and enables users to make a meaningful impact even with a low budget. By offering flexible donation options, the app offers a variety of payment options ensures that donations are processed efficiently and users can participate in the initiative to fight hunger. This low barrier to entry empowers users to take action and support those in need regardless of their financial situation.

Motivation : The ShareTheMeal app's transparency serves as a vital motivator for users to donate because it is part of the UN World Food Programme, which is the world's largest organization providing food aid in over 120 countries. The app updates users on meals donated day by day and how their donations are used. Additionally, users can choose where they want to help and WFP staff in that country will distribute the food to those in need. These visual signals inspire users to generate feelings of empathy and compassion which prompts the user donate to make a difference in the lives of others.

Trigger : The trigger for users is watching short videos showcasing people experiencing hunger and volunteers delivering aid to them. These videos prompt users to empathize with the victims and evoke feelings of empathy and compassion serving as powerful prompts for users to engage with the app. Alongside emotional resonance, the app enables users to track progress and monitor contributions, empowering them to witness the impact of their efforts in real-time. This enables users to actively participate in combating food insecurity, contributing to positive social change with a profound sense of purpose and fulfillment.

Question C: Video for feature of ShareTheMeal Application Technologies in Accordance of Fogg Behaviour Model

Link: : https://drive.google.com/file/d/1dpTW8kQStsKwGTA5mZL89S944i_wGXI8/view?usp=sharing

Question D: Choose one feature of the technology which in your opinion fail to persuade a user to execute the target behaviour

One of the features in ShareTheMeal that we think fail to persuade user to execute the target behavior is **Lack information of donation used**. The absence of feedback or updates regarding how donations are utilized to donor might become one of the resistances in persuading user to execute the target behavior. Users who do not have clearer information about their donation use may feel less committed to the donation program.

Users are initially motivated to donate to help solving this sustainable development goal (Zero-Hunger) , however without the use of donation information , user may feel disconnected from the impact of their contributions. Lack of the feedback regarding how donations are used can lead to a decline in motivation as users may not feel a sense of fulfillment from their donations.

Next, lack of donation information utilization affects the user's ability to track the outcomes of their actions. At this time , the application only provides a approximate financial usage where user cannot clearly identified whether their donation have really ease the needed people burden. This may become a resistance for sustained engagement as users may question the efficacy of their donation without concrete feedback. Also , without the real-time updating of donation information , trigger such as notifications or updates about donation impact will be weakened or nonexistent. Due to user may not receive timely incentives to donate again , leading to a drop in participation over time.

One suggestion to address this lack of financial information could be to attach a more complete monthly report on the use of funds. Things like how much money is being spent on operations or expenses, not just showing how much is being spent on aid. In the current application, some are only general financial distribution, which does not include the actual amount. Transparent finance can make customers more convincing.

In addition, the application can also add a real-time tracking system. The system can be used to keep track of whether a meal donated by a user is being delivered or has already been delivered. And finally, can attach the proof of the meal. Maybe it hurts productivity, but having users see the results will keep them enthusiastic. In this application, there is a part that might lead to a gulf of evaluation due to the cognitive framework. As the picture show, users might think that was a tracking system, but once enter, there is just a explanation of how it operates but not real time tracking.

Then there can be personalized feedback, such as a thank you message after the delivery of the meal, to show the user's contribution to them after donating the meal. This could include success stories, photos, or videos of children benefiting from the meals. This is a kind of reflective design which considering the meaning and personal value of the application.
